June 8, 2020

Dear Colleagues:

In order to provide updates on the evolving response and best practices related to the COVID-19 pandemic, AHP will be delivering brief, critical updates on an ongoing basis addressing important highlights and frequently asked questions.

### **TOMORROW: Behavioral Health Consultation - Tuesday, June 9th, 7:30 am**

Join the AHP Behavioral Health team as well as members from our pharmacy, care management and social work teams every Tuesday and Thursday morning from 7:30am – 8:00 am via Zoom and/or phone for just in-time, virtual consultation support for the behavioral health needs of both your pediatric and adult patients. Click on the zoom link: <https://urmc.zoom.us/j/948873484> or dial in: (646) 876-9923, Meeting ID: 948 873 484.

### **NEXT COVID-19 Response Call - Wednesday, June 10th, 12:15 pm**

Due to the relative stability in the course of the outbreak in our community and the slower influx of information related to it, AHP's COVID-19 response calls will be held at 12:15 pm every Monday, Wednesday and Friday. **Our next COVID-19 Response teleconference will be held at 12:15 pm, Wednesday, June 10th.** Please dial-in to 1 669 900 6833 and enter Meeting ID: 989 6918 4459 or click <https://urmc.zoom.us/j/98969184459>

### **New Online Resources**

***"When Disparity Becomes Despair: A Conversation on Racism"*** Recording of the presentation and discussion featuring Ray Bignalli II, MD. The resources and reading list discussed on the call can be found [here](#).

**MIS-C Evaluation Algorithm:** Tool to assist clinicians with the evaluation of patients suspect for Multi-System Inflammatory Syndrome in Children (MIS-C)

### **Social Distancing Decals Available**

AHP has ordered a supply of floor decals that practices can employ to enforce social distancing in spaces where patients typically queue up (e.g., front desk, weigh station). These decals can only be affixed to un-carpeted surfaces. Contact [Renee Sutton](#) to request a supply for your practice.

### **COVID Serologic Testing**

#### **Clinical Guidance**

Primary care providers may consider ordering IgG antibody testing for:

- Individuals who have fully recovered from COVID-19 who are interested in donating convalescent plasma
- Pediatric patients with suspected or confirmed Multi-System Inflammatory Syndrome in Children (MIS-C)
- Patients who had illness suggestive of COVID but who were unable to receive PCR testing

Referring patients to UR Labs collection site for phlebotomy may be difficult due to volume of patients able to be accommodated, so community providers are advised to draw in the office and

send the tube (SST or standard red top tube) to the lab. For more information about the methodology and performance of UR Labs' testing assay, click [here](#).

### **Reimbursement Guidance**

The only patient cohort for whom health insurance will reliably cover serologic testing are those patients who had symptoms consistent with COVID infection but who were unable to receive PCR testing, and thus antibody testing is being used to confirm prior COVID exposure. The best way to demonstrate this is to code the encounter and reason for test as Z01.84 "Encounter for antibody testing that is not being performed to confirm a current COVID infection nor is being performed as a follow up test after resolution of COVID-19."

### **Clinical Guidance: COVID PCR Testing**

In addition to testing for symptomatic healthcare and other essential workers and long term care residents, primary care providers may consider testing for the following patients:

- Mild to moderately symptomatic patients
- Patients whose living arrangements are not amenable to isolation (e.g., multi-generational household, limitations of physical space, etc.)
- Patients whose employers require evidence of testing either to return to work or to access benefits related to COVID status
- Patients who will be undergoing an aerosolizing procedure (e.g., exercise stress test, endoscopy procedure, transesophageal echocardiography [TEE])
- Pediatric patients with symptoms suggestive of Multi-System Inflammatory Syndrome in Children (MIS-C)
- Children with complex health needs whose specialized childcare providers (e.g., Daystar) require testing prior to returning

**It is likely that these studies will be sent to an outside lab for processing with a turnaround of anywhere from two to five days.**

---

We continue to partner with Dr. Mendoza and County Health Department officials on preparedness and response protocols and will convey information as it becomes available.

Thank you for your continued collaboration in this important public health endeavor.

All the best,
